FILTERFACTS

- **Make sure the filter is NSF-Certified*** to remove lead.
- **Follow the manual** that comes with your filter for correct installation.
- **Do not run hot water** through the filter.
- **Start with cold filtered water** then heat to cook.
- **Your hot water heater tank should be flushed regularly.** Follow manufacturer's instructions or contact a licensed professional for assistance.
- For a video on how to properly use a filter visit [Flintcares.com](https://www.flintcares.com)

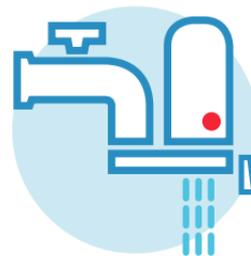

*The U.S. EPA does not endorse NSF International, its products, services, or any product or service that displays the NSF International mark. U.S. EPA does not certify the product. U.S. EPA is aware that the certification mark belongs to an independent organization that certifies these products, and that there are other third party testing services including UL and WQA.
